

MEDIPASS is building the universal digital health passport.

A secure, multilingual and interoperable health identity layer designed for patients, healthcare providers, insurers and institutions worldwide.

FOCUS FOR THIS INVESTOR PROFILE

- A portable health identity layer designed to sit above existing systems.
- Consent, security and interoperability treated as core architecture.
- Detailed materials shared during the investor briefing.

INVESTOR THESIS

- **Fragmented medical identity**
Health records remain tied to individual institutions and national systems. There is no portable, patient-controlled identity layer across providers and borders.
- **Cross-border healthcare growth**
Mobility, expatriation, medical travel and remote care create demand for health information that follows the patient, not the institution.
- **Insurance and care coordination pressure**
Insurers and care networks need verified, consent-based access to health context to reduce duplication, delays and administrative friction.
- **AI-ready health data infrastructure**
Clinical AI is limited by data access and consent. Structured, permissioned health identity is a prerequisite layer, not an add-on.

BUSINESS MODEL

- **B2C subscriptions**
Individual and family plans for portable health identity and premium access.
 - **B2B provider plans**
Clinic, hospital and provider-network subscriptions for intake and continuity workflows.
 - **Insurance and employer partnerships**
Member and workforce health passport programmes, built for coordination use cases.
 - **Government and institutional licensing**
Licensing designed for national and institutional digital health programmes.
 - **Premium emergency and travel features**
Emergency access, multilingual summaries and cross-border travel health services.
- Pricing and revenue mix are expected to evolve by market, regulatory regime and distribution partner.

PLATFORM READINESS

Secure authentication | Multilingual platform | Patient account foundation | Live demo environment | Privacy-first architecture | Designed for consent-based access | Roadmap toward institutional integrations | Pilot-ready deployment scope

This document contains no financial metrics, projections or valuation. Market sizing, model assumptions and traction are shared during the investor briefing.
